PROFILE

My research is deeply interdisciplinary: I seek to understand the computational processes underlying human vision, and to develop better machine vision systems based on this understanding. Over the last twenty years I have been awarded (as Principal Investigator) more than \$13M in direct external research funding to support this research program, including most recently a 5-year \$4M (\$12M with in-kind) collaborative ORF-RE grant and a 6-year \$1.6M NSERC CREATE training grant. I have trained more than 100 graduate and undergraduate research students and postdoctoral fellows, and with them and other colleagues have published more than 80 papers in high-impact international journals, conferences and books, generating more than 7,600 citations. Nine of my former trainees are now in faculty positions in Canada, the US, Australia, France and China. Most of the others are now in senior positions in industry.

The impact of my research has been recognized by a Premier's Research Excellence Award, appointments to editorial boards for three international journals, recent keynote talks at conferences and workshops in the US, China, the UK and Canada. A number of our public datasets have become standard global benchmarks for vision tasks (www.elderlab.yorku.ca/resources).

My research involves close collaboration with Canadian companies and has seen application in 3D synthetic displays for helicopter navigation, highway traffic analytics and sports videography. We hold two patents on attentive sensing systems and have formed a startup to commercialize this technology (www.attentivevision.com).

Note: In biological vision research, peer-reviewed journal papers are the primary mode for dissemination of research findings. In computer vision research, peer-reviewed conference papers (typically 8 pages) are equally important and often highly cited. For example, in terms of citations per paper, the CVPR conference has the highest impact of all computer vision publications (conferences and journals, <http://www.scimagojr.com/>). Acceptance rates for these conferences average around 33%.

The table below compares the impact of computer vision conferences and journals.

RESEARCH LEADERSHIP ACTIVITIES

Overview

I have spearheaded numerous multi-sector, interdisciplinary collaborative projects. I currently lead the 5-year \$12M (\$4M cash) [ORF-RE Intelligent Systems for Sustainable Urban Mobility \(ISSUM\)](#) project involving 5 laboratories at two universities, 2 public sector and 7 industry partners. From 2016-2021, I led the 6-year \$1.65M [NSERC CREATE Training Program in Data Analytics and Visualization \(NSERC CREATE DAV\)](#) involving 9 laboratories at 4 universities and 17 industry partners. I maintain active collaborations with universities in the UK (Southampton University, Aston University, University of Surrey) and China (Dalian University).

I currently serve on the Steering Committee for the York University [Centre for Vision Research](#), and serve as its Seminar Coordinator. I am a Core Member of York's [Vision: Science to Applications \(VISTA\)](#) research program, and have served on the VISTA Leadership Committee and as Chair of its Partnership Committee.

I recently Co-Chaired the [York University Task Force on AI and Society](#) and am co-leading the York research project AI: Engineering, Governance & Society (AI-EGS). I served as Co-Chair of the 2017 and 2018 [Conference on Computer and Robot Vision \(CRV\)](#).
